Amendments to the Claims

This listing of claims replaces all prior versions, and listings, of claims in the above-identified application:

1. **(Currently Amended)** A photoinitiator system for a cationically polymerizable resin, the photoinitiator system comprising:
- (a) an iodonium salt;
 - (b) a visible light sensitizer; and
 - (c) an electron donor compound having an oxidation potential greater than 0 and less than that of 1,4-dimethoxybenzene when measured versus a saturated calomel electrode, wherein the electron donor compound is selected from the group consisting of polycyclic aromatic compounds and N-alkyl carbazole compounds;
- wherein the photoinitiator system has a photoinduced potential less than that of 3-dimethylaminobenzoic acid in a standard solution of 2.9×10^{-5} moles/g diphenyl iodonium hexafluoroantimonate and 1.5×10^{-5} moles/g camphorquinone in 2-butanone.

2. **(Currently Amended)** A photopolymerizable composition comprising:
- (a) a cationically polymerizable resin; and
 - (b) a photoinitiator system for the cationically polymerizable resin, the photoinitiator system comprising:
 - (i) an iodonium salt;
 - (ii) a visible light sensitizer; and
 - (iii) an electron donor compound having an oxidation potential greater than 0 and less than that of 1,4-dimethoxybenzene when measured versus a saturated calomel electrode, wherein the electron donor compound has a pK_b greater than 8; and
- wherein the photoinitiator system has a photoinduced potential less than that of 3-

dimethylaminobenzoic acid in a standard solution of 2.9×10^{-5} moles/g diphenyl iodonium hexafluoroantimonate and 1.5×10^{-5} moles/g camphorquinone in 2-butanone.

3. (Original) A photopolymerizable composition according to claim 2 wherein the cationically polymerizable resin is selected from the group consisting of epoxy, oxetane, vinyl ether and spiro-orthocarbonate resins, and combinations thereof.

4. (Original) A photopolymerizable composition according to claim 3 wherein the cationically polymerizable resin comprises an epoxy resin.

5. (Original) A photopolymerizable composition according to claim 4 wherein the cationically polymerizable resin comprises a silicon-containing epoxy resin.

6. (Original) A photopolymerizable composition according to claim 3 wherein the cationically polymerizable resin comprises a blend of a silicon-containing epoxy resin and an epoxy resin that does not contain silicon.

7. (Original) A photopolymerizable composition according to claim 2 wherein the iodonium salt is selected from the group consisting of diaryliodonium hexafluorophosphate, diaryliodonium hexafluoroantimonate, 4-octyloxyphenyl phenyliodonium hexafluoroantimonate, 4-(2-hydroxytetradylecoxyphenyl) phenyliodonium hexafluoroantimonate, 4-(1-methylethyl)phenyl 4-methylphenyliodonium tetrakis(pentafluorophenyl)borate, and combinations thereof.

8. (Original) A photopolymerizable composition according to claim 2 wherein the visible light sensitizer is selected from the group consisting of ketones, coumarin dyes, xanthene dyes, fluorone dyes, fluorescein dyes, aminoketone dyes, p-substituted aminostyryl ketone

compounds, and combinations thereof.

9. **(Original)** A photopolymerizable composition according to claim 2 wherein the visible light sensitizer is an alpha-diketone.

10. **(Original)** A photopolymerizable composition according to claim 2 wherein the electron donor compound increases the polymerization speed of the photopolymerizable composition relative to the same composition but not containing an electron donor compound.

11. **(Original)** A photopolymerizable composition according to claim 2 wherein the electron donor compound is soluble in the photopolymerizable composition.

12. **(Original)** A photopolymerizable composition according to claim 2 wherein the electron donor compound does not absorb a significant amount of light at the wavelength of the light used to photopolymerize the composition.

13. **(Original)** A photopolymerizable composition according to claim 2 wherein the electron donor compound is substantially non-light absorbing at the wavelength at which the visible light sensitizer displays maximum light absorption.

14. **(Canceled)**

15. **(Original)** A photopolymerizable composition according to claim 2 wherein the composition cures after less than about 2 minutes exposure to a light source that generates light of a wavelength to which the visible light sensitizer is sensitive.

16. **(Original)** A photopolymerizable composition according to claim 2 wherein the

electron donor compound has an oxidation potential less than about 1.35 volts when measured using a saturated calomel electrode.

17. (Original) A photopolymerizable composition according to claim 16 wherein the electron donor compound has an oxidation potential between about 0.5 and 1.34 volts when measured using a saturated calomel electrode.

18. (Currently Amended) A photopolymerizable composition according to claim 2 comprising:

- (a) a cationically polymerizable resin; and
- (b) a photoinitiator system for the cationically polymerizable resin, the photoinitiator system comprising:
 - (i) an iodonium salt;
 - (ii) a visible light sensitizer; and
 - (iii) an electron donor compound having an oxidation potential greater than 0 and less than that of 1,4-dimethoxybenzene when measured versus a saturated calomel electrode, wherein the electron donor compound is selected from the group consisting of polycyclic aromatic compounds and N-alkyl carbazole compounds; and
- wherein the photoinitiator system has a photoinduced potential less than that of 3-dimethylaminobenzoic acid in a standard solution of 2.9×10^{-5} moles/g diphenyl iodonium hexafluoroantimonate and 1.5×10^{-5} moles/g camphorquinone in 2-butanone.

19. (Currently Amended) A photopolymerizable composition according to claim 18 [[2]] wherein the polycyclic aromatic electron donor compound is selected from the group consisting of biphenylenes, naphthalenes, anthracenes, benzanthracenes, pyrenes, azulenes, pentacenes, decacyclenes, and derivatives and combinations thereof.

45. (Currently Amended) A method of reducing the time needed to polymerize a cationically polymerizable resin, the method comprising the steps of:

- (a) providing a cationically polymerizable resin;
- (b) providing a photoinitiator system for the cationically polymerizable resin, the photoinitiator system comprising:
 - (i) an iodonium salt;
 - (ii) a visible light sensitizer; and
 - (iii) an electron donor compound having an oxidation potential greater

than 0 and less than that of 1,4-dimethoxybenzene when measured versus a saturated calomel electrode, wherein the electron donor compound has a pK_b greater than 8; and

wherein the photoinitiator system has a photoinduced potential less than that of 3-dimethylaminobenzoic acid in a standard solution of 2.9×10^{-5} moles/g diphenyl iodonium hexafluoroantimonate and 1.5×10^{-5} moles/g camphorquinone in 2-butanone;

- (c) combining the cationically polymerizable resin and the photoinitiator system to provide a polymerizable mixture; and
- (d) exposing the polymerizable mixture to a light source having a wavelength and intensity to which the photoinitiator system is reactive and for a time until the polymerizable mixture attains a hard, tack-free state;

wherein the time until the polymerizable mixture attains a hard, tack-free state is less than the time required for the same polymerizable mixture, but excluding the electron donor compound, to achieve the same hard, tack-free state when exposed to the same light source.
